The main difference between causal inference and inference of association is that the former analyzes the response of the effect variable when the cause is changed. The science of why things occur is called etiology. ... Explainable Artificial Intelligence (XAI) Deep Learning Neural Networks . Architecture and How They Work. Within that framework, causal loop diagrams can be thought of as sentences that are constructed by identifying the key variables in a system (the “nouns”) and indicating the causal relationships between them via links (the “verbs”).
